

Our young scientists are asked to create journals describing what they learned each day and to comment on their experience. They draw pictures and some even write letters to the CEOs of big corporations asking them to help support the Professor's program. They create these journals voluntarily.

The journal excerpts below represent how much the kids love and learn in our labs. They were taken randomly from hundreds completed by the kids.

Please remember that these comments are in the kid's own words and handwriting. They are just a sample of what you'll find in almost all the journals and clearly shows the impact of Professor Know-How's Lab.

Is there anything else you share about your day with the Professor?

I LOVE

Science, and Professor is the best to teach it!

-Ayelin Dasher

Is there anything else you share about your day with the Professor?

The electric popcycles were very good. Each day, the activities get more and more fun. I LOVE SCIENCE! I can't wait until tomorrow. We will have the best time tomorrow eating pizza. I CAN'T WAIT!!

Dear Mr. Gregg Steinhafel on the behalf of professor I ask you to please help him. You might ask why should I help? The proffsor wants to open or have more labs in orther schools, so they can learn the wonder and talent of science. They would learn lots of things that will make them under stand, also help there science grade go up. Schools will be thrilled to have this program in there school. And if you think about it you are helping kids all over the U.S.A. get more help by Target. If you are intrsted call 770-218-0647. Thankyou.

Is there anything else you share about your day with the Professor?

I loved how we got to do this. It was really amazing about learning all of this. I can't wait till the hair sticking Ven de graf on Friday. I really loved doing a lot of these experiments. I don't want it to change every week, I wish it was every 2 months or every year. I was really nice of you to do it to fifth grade because I don't know if im staying for 6th grade.

Is there anything else you share about your day with the Professor?

I was really excited about coming to the lab. I kept on telling my mom that I can't wait. It was really fun and I can't to come again. I was really tired.

Is there anything else you share about your day with the Professor?

I would want to do this everyday. Every grade 4-6 should be able to do this activity. I LOVE SCIENCE!!!!!! I'm glad your at this school, because I understand your knowledge of science. I can see how you work, so I can learn better understanding how you learn. My favorite part is that we all get to try the experiments out.

Is there anything else you share about your day with the Professor?

I'm very entertained what I learn in your classroom. Like when we took the tiny electrical ball and connected it with the nail to make a lightning hail storm. I can't wait for tomorrow.

Is there anything else you share about your day with the Professor?

I can't wait for Friday Professor and I really had fun on each day. I hope I get picked to come back.

Dear Bill Gates,

You'll be glad to know that so many people at my school are loving Professor Know How's lab. We have learned so much there like, how Luigi Galvani belived in animal science so he tied frog legs to a metal fence to make them move. I hope every kid gets to learn from the professor because they would be 10 times smarter than they were before they walked in. I very much hope that we can get enough money for more labs every where so kids can learn how simple science really is. So, I hope you get this and donate to the science lab.

Is there anything else you share about your day with the Professor?

Monday (yesterday) I Couldn't sleep because I couldn't wait for the next day to see you.  
I thank you for letting me be here for the next few days I know it's going to be fun!

In 2012 our tax return indicated our supporters gave TLC \$45,315.00. Much of those donations went towards building our website and video production. In 2013 we received a similar amount still owing some from the previous year's expenses. This year we built our first real lab from the ground floor up. You read the notes. Can you imagine what we could do with some serious money behind us?

I have run the numbers and the cost per student in just five years will be less than \$10. Think about what we now spend on education in this country and consider just what a fresh "outside the box" idea like TLC could do for education.

Many of you are well connected with the CEOs and board members of some our country's most successful corporations. In fact, some of you run them. I know there are hundreds of very worthy organizations competing for charitable contributions and it can be difficult to get the attention one needs to get a start-up like TLC off and running. But difficult is not the same as impossible.

I have lots of energy and am absolutely committed to seeing this program in enough school across America to not only change the future for thousands of boys and girls but change the future for all of all of America by the contributions these young people will make to our society if we can just help them now.
